Answers in Genesis: The Denial Business

By Jean-Georges Estiot

This booklet has been created to encourage open discussion, thoughtful study and careful critical enquiry. It is intended as a resource that invites readers to question, reflect and explore ideas deeply, rather than accept them without consideration. Permission is given to reproduce the content of this booklet for any purpose.

My email is jgestiot@gmail.com and your feedback is welcome.

In the beginning

There is a point where belief becomes so rigid, so calcified, that it stops pretending to be a search for truth and instead turns into a performance, a theatre of certainty, complete with costumes, props, and pre-written lines. Enter Answers in Genesis. Not just a website, not just a collection of articles, but an entire worldview wrapped in a neat, literal interpretation of Genesis. The Earth is 6,000 years old, dinosaurs lived with humans, Noah built a giant wooden boat that held every land animal alive today, and it all happened exactly as written by anonymous authors in the ancient Near East. No metaphor. No mystery. Just divine dictation and the rest of us too blind or too sinful to see it.

It would be laughable if it were not so well-funded. Answers in Genesis, under the stern gaze of Ken Ham, has not only built a multimillion dollar empire but also managed to repackage ancient mythology as scientific education. The Ark Encounter looms over Kentucky like a monument to manufactured certainty, while the Creation Museum exists to teach children that fairy tales are history and evidence is heresy. These are not fringe institutions scribbled out in the margins of society. They are slick, polished, and marketed with evangelical precision. And worse, they are taken seriously by people with political power and voting rights.

This booklet is not about religion in the personal sense. It is not about spirituality, morality, or even the idea of faith itself. It is about what happens when blind allegiance to ancient texts hijacks the language of science, reason, and evidence. It is about the deliberate twisting of knowledge to serve an agenda, and the arrogance of pretending that divine revelation trumps observable reality. Answers in Genesis does not merely believe something different; it demands that everyone else abandon reason and kneel before its interpretation of scripture.

Throughout the coming sections, we will dissect the core claims, the dishonest tactics, and the outright fabrications promoted by Answers in Genesis. We will look at how they redefine science, invent facts, reject centuries of accumulated knowledge, and wrap it all in a slick Christian marketing strategy. We will expose how they train followers to mistrust evidence, reinterpret contradictions, and recite pre-packaged answers to complex questions. This is not harmless belief. It is institutionalised ignorance.

We will not waste time on philosophical dances or theological hedging. Those games are for people who think clever words can substitute for reality. This is about facts: how they are ignored, distorted, and replaced by doctrine. This is about a worldview so insecure that it must rewrite biology, geology, astronomy, and history to survive. And it is about a public too often willing to give this nonsense the benefit of the doubt in the name of tolerance or tradition.

Answers in Genesis is not just wrong. It is proudly, systematically, and deliberately wrong. And it is time to say so, without apology.

The illusion of certainty

Answers in Genesis begins with an answer and then works backwards. It does not start with looking at the world, asking questions, or testing ideas. It starts with a fixed conclusion: that the Bible, especially the book of Genesis, is completely true in every detail. Everything else must be forced to fit that claim. This is not science. It is not even honest thinking. It is belief pretending to be knowledge. In their world, certainty is not earned through learning. It is claimed from the start and protected at all costs.

Ken Ham and his group call this a “biblical worldview.” What it really means is that they are never allowed to be wrong. If a fossil does not fit their timeline, the fossil must be explained away. If DNA shows how life changes over time, then DNA must be part of a trick. If rocks show layers built up over millions of years, then the scientists who say so must be lying. No mistake is possible because their book says it is not. The Bible says it, so it must be true. End of story. This is not thinking. It is obeying.

To keep this fake certainty going, they play games with science. They split it into “operational science” and “historical science” so they can trust science when it helps them, such as flying in planes or using phones, but reject it when it says the Earth is old or that humans share ancestors with other animals. This is picking and choosing. It is pretending to be smart while actually running from the truth.

What makes this worse is how they teach others to do the same. The people who follow Answers in Genesis are not taught how to think. They are given answers to repeat. The website and the museums offer simple replies to complex questions, along with Bible verses and a confident tone. But there is no real learning. There is only memorising. Real questions are not welcome unless they lead back to the same answers. If you doubt, you are told you lack faith. If you question, you are told to be quiet and trust the book.

To protect their made-up certainty, they also change the rules about what counts as evidence. If something supports their view, they cheer it loudly, even if it is a poor idea taken out of context. If something disagrees, they ignore it or attack it. Peer review is dismissed as a trick. Radio dating methods are called broken just because they give the “wrong” answer. Fossil records are blamed on a flood. Missing facts are filled with magic. Contradictions are brushed off as tests from God. This is not honest thinking. It is pretending not to see.

This kind of thinking feels safe. It tells people that the world is simple. Everything has one answer. There are no mysteries. Good people believe, and bad people ask too many questions. It sounds easy. But the price of this comfort is high. To stay inside their bubble, you must ignore reality, fear knowledge, and repeat the same lines forever. The moment you ask a real question, the whole story starts to fall apart.

Believing in something without question is not a strength. It is a weakness dressed up as pride. It stops people from learning. It shuts the door to discovery. It teaches that the most important questions were answered long ago by people who did not know where the sun goes at night. It says science is useless and only old words matter. That is not just wrong. It is insulting.

What Answers in Genesis sells is not truth. It is fake certainty. And there is nothing more dangerous than blind confidence built on nothing at all.

A world in 6,000 years

To believe the Earth is only 6,000 years old, you must ignore nearly everything that science has discovered. You must close your eyes to geology, astronomy, biology, chemistry, and physics. You must pretend that the speed of light has changed, that rocks do not decay at a steady rate, that fossils appeared fully formed, and that entire continents and mountain ranges sprang into place overnight. You must also believe that every expert in every scientific field across the world is either wrong or lying. This is the fantasy world Answers in Genesis invites you to live in.

Their claim is simple. The Bible includes a list of names and ages, and when you add them all together, you get a world created around 4,000 BC. That is the foundation. No matter what the rocks say, or what the stars show, or what the atoms reveal, they insist the Earth must be young because that is what their book demands. And if reality disagrees, then reality must be rewritten. This is not just bad thinking. It is a rejection of how knowledge works.

Geology is one of their biggest problems. The layers of rock found across the world show a clear, ordered history of the planet. They contain fossils arranged in patterns that match evolution. They include evidence of ancient rivers, deserts, and seas that existed long before any written language. These layers were not formed in a few weeks of floodwater. They were laid down over millions of years, shaped by pressure, heat, erosion, and time. You can see the results with your own eyes. You can even hold them in your hands. But to Answers in Genesis, these rocks must be lies planted by scientists or mistakes caused by a global flood. Their model cannot explain the order of the layers, the spread of the fossils, or the clear signs of deep time. So they pretend those problems do not exist.

Astronomy is even worse for them. Light from distant stars takes millions of years to reach Earth. We see galaxies that are billions of light years away, meaning the universe must be at least that old. But Ken Ham and his team insist that either the speed of light was faster in the past, or God simply created the light in transit. In other words, God built the universe with fake evidence built in. This means the stars we see never really shone. The light we receive was never real. This is not a model of science. It is a confession that they would rather believe in magic than admit the Bible is not a science textbook.

Radiometric dating is another problem they cannot solve. Scientists use it to measure the age of rocks and fossils by looking at how atoms change over time. These methods are tested, repeatable, and reliable across many different samples. They agree with each other. They match the evidence from ice cores, tree rings, and sediment layers. But because the answers do not match Genesis, Answers in Genesis says the methods are broken. Not some of them, not occasionally, but always, completely, without exception. This is not just unlikely. It is impossible. It is like claiming every clock in the world is wrong, but the sundial in your backyard tells perfect time.

The young-Earth model also cannot explain simple facts of everyday science. Coral reefs take thousands of years to form. Oil and coal take millions. The Grand Canyon took ages to carve. Stars are born and die across timescales far beyond six thousand years. None of this fits into their timeline. So they wave it all away with one word: the Flood. They say the global flood reshaped the world, buried all the fossils, made all the rocks, and reset the clocks. But a flood cannot create radioactive decay. It cannot stretch light across space. It cannot arrange fossils in perfect evolutionary order across every continent. These are not small problems. They are fatal to the

entire model.

The worst part is not the ignorance. It is the arrogance. Answers in Genesis does not say the Earth might be young. They say it must be. They claim that anyone who disagrees is not just wrong, but evil. They accuse scientists of lying, schools of brainwashing, and museums of pushing atheism. This is not an honest mistake. It is a war on truth. And it is being waged with the support of churches, money, and public trust.

To believe in a 6,000-year-old Earth, you must throw away everything we have learned through careful study and honest work. You must believe that your book is right and the universe is wrong. You must choose fantasy over fact, and call it faith. That is not science. That is blindfolding yourself and calling it vision.

Dragons on the ark

If someone told you that dinosaurs lived alongside humans, boarded Noah's ark two by two, and died out after the flood, you would probably laugh. You should. It is absurd. But that is exactly what Answers in Genesis teaches, and they have built entire museums and life-sized attractions to push this fantasy as fact. The Ark Encounter in Kentucky is not a fringe curiosity. It is a professionally built, publicly funded theme park that presents myth as history, and does it with a straight face.

The centrepiece is a massive wooden boat, 155 metres long, built to biblical specifications, supposedly to prove that the flood story is physically possible. Inside, animatronic displays show Noah and his family caring for animals in wooden cages. Among the animals are dinosaurs. Not cartoonish ones, but carefully modelled creatures with serious placards and scientific-sounding explanations. The message is clear: dinosaurs were real, lived with humans, and survived on the ark. The fact that this is taught to schoolchildren as part of an educational visit should terrify anyone who values truth.

According to Answers in Genesis, the dinosaurs were created on the sixth day, lived peacefully with humans in Eden, and only turned violent after sin entered the world. This is why the T. rex is shown with flat teeth and a gentle expression, apparently before it started eating meat. They claim that the word "dragon" in the Bible refers to dinosaurs, that legends of fire-breathing monsters are just historical memories, and that extinction happened rapidly after the flood. This is not a scientific model. It is a bedtime story stretched out over three floors and millions of dollars.

The problem is not just the content. It is the method. Every display is designed to look like science. There are charts, timelines, diagrams, and mock laboratories. But none of it comes from real evidence. It is all built around the Bible, and anything that disagrees with Genesis is either changed, ignored, or blamed on secular bias. The Ark Encounter does not encourage curiosity. It encourages obedience. It trains visitors to believe that reality must be filtered through scripture, and that any evidence outside that filter is wrong by default.

The Creation Museum, also run by Answers in Genesis, follows the same model. Fossils are explained as flood deposits. Human history is rewritten to match Genesis. Ancient civilisations are squeezed into a post-flood timeline. There are dioramas of humans riding dinosaurs, videos of children asking scripted questions, and gift shops full of creationist books and toys. This is not just religion. It is marketing. It is belief sold as fact, packaged in plastic, and branded with Bible verses.

None of this is harmless. It confuses children, misleads parents, and spreads a deep mistrust of science. It teaches that all real learning must bow to a book written by people who had never seen a microscope or a telescope. It tells visitors that scientists are biased, that museums lie, and that only Ken Ham's team tells the truth. This is not education. It is propaganda with good lighting and padded benches.

Worse still, it is funded by taxpayers. The state of Kentucky gave the Ark Encounter tax breaks and subsidies on the promise of tourism and jobs. In return, they got a religious theme park that discriminates in hiring, promotes a single narrow view of the world, and openly rejects science. It is a monument to ignorance built with public money. And it is working. Millions of visitors come each year, many of them leaving more certain and less informed than when they arrived.

The image of dinosaurs on the ark is more than just a strange idea. It is a symbol of how far Answers in Genesis is willing to go to protect its story. They will rewrite biology, twist history, and turn science into theatre. They will teach children that fantasy is truth, and that questions are dangerous. They will call it faith. But in reality, it is fear dressed up as education, and it deserves to be torn down, one fake dinosaur at a time.

Killing evolution

Of all the scientific ideas that Answers in Genesis despises, none is attacked more often or more bitterly than evolution. It is their main enemy, their constant target, and

the idea they twist most completely out of shape. They do not just say it is wrong. They say it is evil. They claim it leads to racism, genocide, abortion, and atheism. In their world, evolution is not just a theory about biology. It is the root of all modern decay. This is not a scientific argument. It is a moral panic dressed in a lab coat.

Their basic claim is simple. Life did not change slowly over time. It was all created at once, fully formed, just as the Bible says. Every kind of animal and plant appeared on Earth during one week, about 6,000 years ago. Dinosaurs, humans, whales, insects, trees, and bacteria all sprang into existence together. Evolution, they argue, is a lie made up by scientists who hate God. They ignore the fact that evolution is supported by mountains of evidence from genetics, fossils, anatomy, and observation. They just repeat the same tired phrases: kinds, microevolution, design, complexity, and always with a Bible verse to back it up.

One of their favourite tricks is to split evolution into “micro” and “macro.” They say microevolution is real. Animals can change in small ways. Dogs can vary in size and shape. Bacteria can develop resistance. But they claim macroevolution, big changes over long time periods, has never been seen and never happened. This is false. The same processes that change small features over short time periods also change species over long ones. We have fossils that show the steps. We have DNA that shows the links. The only way to miss this is to close your eyes on purpose.

Another common claim is that evolution breaks the laws of nature. They say information cannot increase. They say new features cannot appear. They say random change cannot build complexity. Every one of these claims has been shown false. New genes arise through duplication and mutation. Complexity grows through step-by-step improvement. Natural selection is not random. It acts on variation in a logical, testable way. But Answers in Genesis does not care. They are not looking for truth. They are looking for excuses to keep saying the Bible is right.

They also love to say that evolution is “just a theory.” What they mean is that it is a guess. But in science, a theory is not a guess. It is a tested and confirmed explanation that fits the facts. Gravity is a theory. Germs are a theory. The Earth orbiting the sun is a theory. Evolution fits into that same category. It explains the patterns we see in living things. It makes predictions. It works. The fact that Answers in Genesis must lie about what the word “theory” means shows how little respect they have for honest thinking.

Even worse is their attempt to tie evolution to evil. They say it caused Hitler. They say it supports racism. They claim it leads to moral collapse. These arguments are not

just wrong. They are disgusting. Evolution explains how life changes. It says nothing about how we should behave. Misusing science to justify evil is not the fault of the science. It is the fault of the person twisting it. But Answers in Genesis never lets facts get in the way of a good scare. If they can make parents afraid of their children learning evolution, they count that as a win.

Their whole approach is built on fear. They fear change. They fear doubt. They fear a world that does not match their book. So they attack the science that explains life, and replace it with a story that cannot change, even when it is clearly wrong. They call this faith. But real faith does not need lies to protect it. Real faith can face facts. What Answers in Genesis offers is not faith. It is a fortress of denial, built to keep out the modern world.

Evolution does not threaten belief. It threatens control. It says life is messy, complicated, and ancient. It says truth is found by testing and thinking. That is what they really fear. Not the theory itself, but the kind of mind that asks too many questions. And that is exactly the kind of mind they want to shut down.

The cost of ignorance

The damage done by Answers in Genesis is not limited to confusion about fossils or timelines. It spreads far beyond the pages of Genesis and into classrooms, families, and public policy. This is not just about being wrong. It is about teaching people to stay wrong on purpose, to distrust experts, to ignore facts, and to treat knowledge as a threat. It poisons education, weakens society, and turns young minds into parrots of ancient myths. The cost of this ignorance is not paid in theory. It is paid in the real world.

One of the most serious harms is to science education. Children who are taught that evolution is a lie, that the Earth is young, and that all animals lived on a boat for a year, are being robbed of a real understanding of the world. They are sent into classrooms already armed with falsehoods and suspicion. They are told that any science that disagrees with Genesis is part of an atheist agenda. This is not just unfair to science. It is unfair to the children. It cripples their ability to learn, ask questions, or take part in the world of ideas. It turns the classroom into a battlefield and turns teachers into enemies.

It also undermines trust in experts. Answers in Genesis trains people to think that scientists are liars, that universities are corrupt, and that museums are pushing a false

religion called “naturalism.” The result is a population less likely to believe in climate change, less willing to vaccinate their children, less able to make good decisions in a crisis. Once you have taught people that all knowledge is biased unless it comes from your book, you have opened the door to every kind of conspiracy and delusion.

In churches, it creates division. Believers who accept science are called compromisers. Pastors who try to teach both faith and facts are accused of betrayal. *Answers in Genesis* does not just promote one view. It attacks all others. It tells Christians that they must choose between the Bible and reality. Many walk away from religion entirely, not because of science, but because they were told they could not believe both. The damage here is deep and personal. Families are split. Communities shrink. Belief itself becomes brittle, unable to survive outside the bubble.

This kind of thinking also affects politics. Politicians influenced by creationist ideas push for laws that weaken science standards, promote religious materials in schools, and block proper sex education. Public funds are given to projects like the Ark Encounter. Voters are swayed by appeals to faith over evidence. Policies are shaped not by data, but by dogma. The harm is not limited to those who believe. It spreads to everyone living under the same laws.

Answers in Genesis also harms the public understanding of what science is. By calling their beliefs “creation science,” they muddy the meaning of science itself. They pretend that putting on a lab coat and drawing a diagram turns myth into fact. They teach people that belief is as valid as evidence, and that if you can ask a clever question, you have disproved a whole field. But science is not about poking holes. It is about building knowledge through testing and revision. It grows stronger by facing its limits. Creationism does the opposite. It hides from questions and calls that bravery.

Worst of all is the pride they take in not knowing. *Answers in Genesis* celebrates ignorance as faithfulness. It praises those who reject learning. It honours the closing of the mind as a kind of holiness. In doing so, it turns knowledge into sin and doubt into a crime. This is not just sad. It is dangerous. Because the world we live in demands thinking. It demands careful judgement, evidence, and reason. These things are not optional. They are how we solve problems, make progress, and stay alive.

The cost of ignorance is not paid in museum halls or church pews. It is paid in hospitals, in classrooms, in courts, and in governments. It is paid by children who fall behind, by voters who make poor choices, by communities that divide, and by a culture that learns to fear its own mind. *Answers in Genesis* may dress its teachings in

smiles and scripture, but underneath it is a machine built to stall the future. And we are all paying the price.

Running from debate

Answers in Genesis does not engage in open debate. It avoids it, redefines it, or pretends it already won. For a group that claims to hold the truth, they are remarkably eager to hide from challenge. Real science welcomes questions, thrives on testing, and changes when the facts demand it. But creationism, especially of the Ken Ham variety, cannot afford that risk. The moment it opens the door to honest debate, it starts to fall apart. So instead, it builds walls.

These walls come in many forms. The first is language. Answers in Genesis constantly talks about “worldviews.” They say that everyone has a worldview, and that this shapes how we see facts. On the surface, this sounds reasonable. But they use it as a shield. When presented with evidence, they say, “You just have a different worldview.” They do not refute the facts. They declare them irrelevant. It is a trick to avoid answering the question. It is not debate. It is retreat.

They also claim that secular science is biased, that it starts with the assumption that God does not exist, and therefore must be wrong. But this is backwards. Science does not begin with conclusions. It begins with questions. It does not rule out God. It simply tests what can be measured. If creationism had evidence, it would be science. But it does not, so it hides behind complaints. “They will not publish our papers,” they say. But the reason is simple. Their papers are not scientific. They start with the answer and work backwards. That is not research. That is sales.

When invited to real debates, they either refuse or set the terms so tightly that no real challenge is possible. Ken Ham’s debate with Bill Nye was a perfect example. It looked like an open discussion, but it was not. Ham made it clear from the start that no amount of evidence would ever change his mind. He even said, when asked what could convince him he was wrong, “Nothing.” Nye, on the other hand, gave clear answers, relied on facts, and said he would change his mind if the evidence changed. One man was doing science. The other was playing defence.

Answers in Genesis also debates by talking to itself. Their website is full of articles responding to imaginary critics. They write long pieces pretending to answer questions, but the questions are carefully chosen and easily dismissed. Real objections

are ignored. Peer-reviewed responses are avoided. Critics are called dishonest, sinful, or confused. There is no curiosity, no humility, no sign of a mind open to new ideas. There is only repetition and blame.

Their refusal to engage also shows in how they train their followers. Answers in Genesis tells people not to read opposing views. Not to listen to experts. Not to trust museums, teachers, or even pastors who disagree. They encourage a closed loop of thought. You are told that doubt is dangerous, that questions come from Satan, and that truth is already known. In this system, debate is not just avoided. It is treated as a threat to your soul. That is not thinking. That is control.

Even when they respond to criticism, it is through misrepresentation. They often quote scientists out of context, twist meanings, and build straw men. Then they knock down these false versions of real arguments and declare victory. This is not how debate works. It is how propaganda works. And it fools people who do not know the difference.

Real debate requires courage. It means putting your ideas to the test and being ready to change if they fail. But Answers in Genesis has no interest in that. Its mission is to protect its story, not to test it. It fears the open field of ideas, because it cannot win there. It builds a castle, fills the moat, and throws stones from the tower. But it will not open the gate.

What kind of truth hides from questions? What kind of knowledge fears the light? The answer is simple. The kind that knows it cannot stand. Answers in Genesis runs from debate not because it is strong, but because it is weak. And deep down, even they know it.

Selling salvation

Answers in Genesis presents itself as a ministry. A mission. A group devoted to spreading the word of God through science, education, and public outreach. But peel back the layers of piety and what you find is a well-oiled business. This is not just about faith. It is about money. Selling salvation has become a brand. And like any brand, it needs advertising, products, ticket sales, and a steady flow of paying customers. Behind every sermon is a price tag.

The Ark Encounter alone is proof of this. It is not a church. It is a theme park. Visitors pay up to fifty dollars for entry, with extra charges for parking, food, and add-ons. Inside, you can buy Noah-themed merchandise, DVDs of creationist teaching,

books explaining how the Grand Canyon was formed in days, and even plush toy dinosaurs. The Creation Museum operates the same way. Religion is packaged, branded, and sold to families looking for a Christian alternative to science. The exhibits may preach about salvation, but the gift shops are the real gospel.

The business model is simple. Fear sells. Answers in Genesis tells parents that the world is full of lies. That schools are turning their children into atheists. That evolution leads to sin. That science cannot be trusted. Once fear takes root, the solution is offered: come to the ark. Buy the books. Watch the videos. Join the newsletter. Support the mission. The message is clear. If you do not want your children to be “lost,” you had better start shopping. The truth, apparently, comes with a barcode.

This is not just about making money. It is about controlling a market. Answers in Genesis does not just provide resources. It builds walls around them. It tells its followers not to trust secular books, not to attend museums, not to watch nature documentaries, and not to read science journals. Only approved materials are allowed. All from their store, all wrapped in scripture, and all designed to keep the customer loyal. This is not faith. It is a monopoly on belief.

They also push a steady stream of donation drives. The website is full of urgent appeals. Help us fight the culture war. Help us protect children from lies. Help us build new exhibits. The tone is always one of crisis. Give now or truth will be lost forever. But the result is always the same: more money, more marketing, more buildings, more attractions. A better business, dressed in the language of spiritual warfare.

Even their so-called research follows the business model. The Answers Research Journal is not a neutral space for inquiry. It is a tool to provide credibility to the brand. Papers are only accepted if they support the Bible. No opposing view is allowed. No real peer review is done. But the goal is not to discover anything new. It is to give the illusion of scholarship. To sell the idea that their beliefs are backed by science, while carefully controlling what counts as evidence.

Ken Ham himself is not just a preacher. He is a businessman. He appears in videos, writes books, gives speeches, and sells his version of truth like a product on a shelf. His tone is always urgent. His claims are always final. And his audience is always asked to support the work with their wallets. He has built a brand that trades in certainty, fear, and nostalgia, and made himself the face of it. The gospel, according to Answers in Genesis, is not only about saving souls. It is about growing the operation.

This kind of money-soaked religion has been around forever. But what makes

Answers in Genesis worse is the way it hides its commerce behind a wall of moral outrage. It pretends to fight for truth, while selling simplified lies. It claims to defend children, while feeding them fairy tales for profit. It accuses science of corruption, while raking in millions from frightened parents and curious tourists. It is a business pretending to be a cause.

Selling salvation has become their mission. And business is good.

Dust to dust

In the end, the story that Answers in Genesis tells is not about truth. It is about fear. Fear of change, fear of questions, fear of being wrong. It is a story that begins with a fixed answer and then spends every waking moment trying to protect it. Not through evidence, not through logic, but through repetition, denial, and spectacle. It is a story that insists the Earth is young, that dinosaurs were pets, that science is a trick, and that the only real knowledge comes from a book written before plumbing was invented. And this story, though loud and well-funded, is crumbling.

Because no matter how many fake museums they build, no matter how many plastic dinosaurs they sell, reality does not go away. The rocks are still old. The stars are still far. The genes still show a tangled history of life stretching back billions of years. The fossils still whisper of creatures long gone, each layer of stone another page in a book far older and more honest than Genesis. You can shout over it, dress it up, call it heresy, but it will not change. Truth is patient. It does not need to scream.

What Answers in Genesis has built is not a defence of faith. It is a trap for the mind. It tells people that doubt is sin, that science is evil, and that thinking for yourself is a slippery slope to hell. It dresses this up in kindness and smiles, but it is still control. It turns the Bible into a weapon and children into soldiers in a war they never chose. It buries questions and praises ignorance. It demands loyalty, not learning.

And for what? So that a few men can feel certain. So that a museum can sell tickets. So that a theme park can scare families into submission. So that a brand can survive another year. They claim to be saving souls, but they are only building walls. They fear the open world, so they invent a smaller one. They call it truth, but it is only comfort. And comfort built on lies is not peace. It is decay.

The real world is not simple. It is not always easy. It is full of mystery, pain, beauty, and wonder. But it is real. It can be touched, tested, questioned, and understood. That is the world science gives us. Not a perfect one, but a real one. One where knowledge

is earned, not declared. One where we learn from the past rather than rewrite it. One where the stars above and the bones below tell a story that is bigger, deeper, and more honest than any ancient scroll.

Answers in Genesis will pass. It will crumble under the weight of its own denial. Its books will gather dust, its parks will fade, and its slogans will be forgotten. Because truth moves forward. And when all the shouting stops, and all the dogma falls silent, the rocks will still be old, the light will still be ancient, and the truth will still be standing. Dust to dust. That is how it ends. Not with glory, but with quiet, deserved extinction.
